EXPERIMENT

Title

TARGET SUM

Description

You are given a list of integers, and your task is to write a function that finds the two numbers in the list that add up to a specific target sum. You need to return the indices of these two numbers.

Write a function that takes a list of integers and a target sum as input and returns a list of two indices (0-based) of the numbers that add up to the target sum. Assume that there is exactly one solution, and you cannot use the same element twice.

Sample Input:

2 7 11 15

9

Sample Output:

[0, 1]

Source Code:

```
def reverse_words(string):  
    words = string.split()  
    words.reverse()  
    reversed_string = " ".join(words)  
    return reversed_string  
  
input_string = input()  
reversed_string = reverse_words(input_string)  
print(reversed_string)
```
